

# Manipulating CSV Files

---

In this activity, you will use list comprehensions to compose a wedding invitation to send to every name on your mailing list.

## Instructions

- Open the file called `comprehensions.py`.
- Run the provided program. Note that nothing forces you to write the name "properly"—e.g., as "Jane" instead of "jAnE". You will use list comprehensions to fix this.
  - First, use list comprehensions to create a new list that contains the lowercase version of each of the names your user provided.
  - Then, use list comprehensions to create a new list that contains the title-cased versions of each of the names in your lower-cased list.

## Bonuses

- Instead of creating a lower-cased list and *then* a title-cased list, create the title-cased list in a single comprehension.

## Hints

- See the documentation for the `title` method.
