

Regression in the NBA

Your turn to run a regression analysis on the 2017 NBA Season.

Instructions

- Run a regression analysis on the 2017 NBA season stats.
- You will use `PTS` as your Y variable, or dependent variable.
- You will determine which X variables, or independent variables, to use.
- After you have run regression, explain why your choice was or was not a good choice.
 - Does it results in a good `R Square` value?
 - Is your choice statistically reliable?
 - Explain what your coefficients mean.
- Finally produce a scatter plot and explain your overall analysis.
