Ice Cream Flavors

For this warm-up, you are going to be making a basic chart in which you track favorite ice cream flavors. Unlike spreadsheets you have made in the past, however, you are going to be starting this table from scratch.

Instructions

1. Enter the following values in an Excel spreadsheet:

Flavor	Number of Faves
Vanilla	67
Chocolate	53
Strawberry	64
Mint	94
Rocky Road	57
Rainbow Sherbert	79
Butter Pecan	96
Cookie Dough	41
Coffee	34
Neapolitan	15

2. Create a new cell at the bottom of your table which adds up all of the "Number of Faves" values.

3. Create a new column "Percentage of Total" that you will use to determine what percentage of the total number of favorites a particular ice cream has.

4. Use the "Format as Table" option to make all three columns into a table and then sort by descending order on the "Percentage of Total" column.
